Report Card

Expectations	Score
1. data engineer - datalab/dataprep/data studio	100 %

Exam Breakdown

data engineer - datalab/dataprep/data studio   ^

1. **What other Google Cloud service does Dataprep use to complete the process of transforming data?**   ^

A. Dataflow	✓ **Correct**
B. BigQuery	
C. Datalab	
D. Dataproc	

👍 👎

2. **Select the IAM roles necessary (using security principle of least privilege) to use Datalab. (Choose all that apply)**   ^

A. Compute Instance Admin	✓ **Correct**
B. Project Editor	
C. Service Account Actor (now Service Account User)	✓ **Correct**
D. Project Owner	

👍 👎

3. **What open source software is Datalab based on?**   ^

A. Jupyter	✓ **Correct**
B. Tensorflow	
C. Apache Kafka	
D. Apache Hive	

👍 👎

4. **Which of these is NOT a data format that Dataprep can use?**   ^

A. DOC	✓ **Correct**
B. Avro	
C. LOG	
D. XLS	

👍 👎

5. You need to prepare source data for analysis in BigQuery and want to delete rows that are missing data in your Date column. What should you do? ⌃

A. Use Cloud Dataprep to view the source data sample. Write a recipe to transform the data to remove rows that have the Date field blank.	
B. Use Cloud Dataprep to view the source data sample. In the Date column, highlight a blank cell and use the suggestion to delete blank rows to apply to the rest of the document.	✓ **Correct**
C. Write a Cloud Dataflow application using Apache Beam to examine the source data, remove the blank rows, and transform the data with the new results.	
D. Write a Cloud Dataflow application using Apache Spark to examine the source data, remove the blank rows, and transform the data with the new results.	

👍 👎

6. What is Cloud Dataprep? ⌃

A. Interactive Jupyter notebook.	
B. A managed Hadoop service.	
C. A managed stream processor built on Apache Beam.	
D. Intelligent data preparation in a web-based format.	✓ **Correct**

👍 👎
